

The Power of We™

IP Office Power User

Stay connected and productive – anywhere

Overview

The ultimate in communications accessibility, IP Office *Power User* enables executives and managers to be as productive as possible in virtually any circumstances. Whether in the office, down the hall, at home, or on the road, *Power User* lets key personnel always be responsive to customers and colleagues.

Armed with a laptop and any phone, *Power User* software (in conjunction with Preferred, Advanced, or Server Editions), unifies communications to help ensure the most important staff are working at the highest levels of productivity and efficiency at all times.

Capabilities

Manage your office from your mobile device – Provide customers and others with just your office phone number and have all calls ring simultaneously on any other phone (mobile, remote office, home), eliminating missed calls when out of the office or away from your desk. Create and manage conference calls right from your mobile device with just a click. Extend presence and instant messaging capabilities to your mobile device, so you can see who's available and instantly contact them through IM.

Control calls from a laptop – As long as you've got an Internet connection, *Power User* will allow you to turn your laptop into an office phone, with the full complement of features and capabilities delivered via an easy-to-use PC interface. Reduce or eliminate calling fees and help people stay connected. Make and receive personal video calls to another *Power User* or Teleworker on the network!

Email text-to-speech – Receive important email messages without access to a laptop or smartphone by having them read over the phone with advanced text-to-speech capability.

Unified messaging – Access voicemail and e-mail in one mailbox and see all your messages together for fast, efficient access to information. Synchronization keeps all mailboxes up-to-date. Access all messages via a web-browser.

Message notification – Automatically receive notification of new messages and access them via any phone (including both iOS and Android powered smartphones), respond to messages and more.

Host conference calls – Set up regular, secure “meet-me” dial in conferences, or host them “on the fly.” With 128-party conferencing built-in (with up to 64-parties per conference), IP Office enables cost-effective collaboration.

Benefits

- **Non-stop productivity** – Stay connected, responsive and productive under just about any circumstances – sharing ideas, providing direction and delivering on commitments.
- **Increased responsiveness** – Being accessible and responsive to customers and colleagues is critical, and with *Power User* key executives are available anytime, anywhere.
- **Improved bottom line** – Faster decisions and better customer service often translate into greater revenue generation and a more attractive bottom line.
- **Reduced costs** – Built-in features (such as conferencing) help reduce ongoing costs while delivering powerful new capabilities that differentiate the small business.
